Public transportation survey: assessing the impact of COVID-19 on public transport

You are kindly requested to complete the Public Transport Survey available in the link below. The purpose of the survey is to establish whether it would be possible to minimise the number of people on public transport during the peak times of travel in order to flatten the Covid-19 curve. We would like to map the potential ways in which a single employer can introduce additional shifts to minimise the number of workers present in the workplace at any time as well as to significantly reduce numbers of commuters on the road at peak times.
